

CASE STUDY › CREDIT UNION

The Customer

With 90,000 members and over \$1 billion in assets, it was a necessity for this credit union to have a dependable backup solution to safeguard both their customers' and their own ten terabytes of data.

The Challenge

When the credit union decided a new backup and recovery solution was called for to improve confidence in their backups and the ability to perform restores in a timely fashion, the challenge was to identify the solution that would best fit their needs. Key needs were identified as the ability to perform rapid multiple, simultaneous backups, cost reduction, a reduced recovery point objective, and elimination of the need to go off-site for tapes every time a restore was required.

The Solution

After thoroughly evaluating multiple potential backup and recovery solutions, the credit union decided on a fully integrated STORServer Backup Appliance. This disk-to-disk-to-tape solution configured specifically for them has allowed the credit union to achieve backups in minutes that previously took hours. The ability to recover data on-site from disk rather than going off-site for tapes has also saved significant time and money. With the added benefit of timely and effective support, the credit union's implementation of the STORServer Backup Appliance has been deemed a complete success. As the credit union expands their business, their full intention is to expand their use of STORServer solutions to meet their growing needs.
