

## CASE STUDY › FEDERAL GOVERNMENT

### The Customer

This contractor provides engineering solutions to the federal government. One of their many responsibilities is the management and security of mission-critical data.

### The Challenge

When sourcing a new backup solution, the contractor had to consider the following environment:

- 20TB total data
- 150GB of daily changed data
- 2 domains
- 24 servers/workstations
- Windows, Linux, Solaris, Sybase
- SAN

Backup across the LAN with minimal network impact and no downtime was a requirement.

### The Solution

Through extensive solution analysis, the contractor determined a STORServer Backup Appliance would best meet their budgetary and business needs. Since only incremental backups are done to secure data across the entire network, downtime is not an issue and system administration takes only 10-15 minutes a day, saving significant time. Automated tape reclamation and fast restores also save time and money.

### ABOUT STORSERVER

STORServer, Inc., headquartered in Colorado Springs, CO is a leading provider of data backup solutions for the mid-market. We offer a complete suite of appliances, software, and services that solve today's backup, archive and disaster recovery challenges.
