

CASE STUDY › NON-PROFIT

The Customer

This non-profit organization's IT department was chartered with the responsibility of flawless backup of data in support of donors and employees alike. Serving both constituencies required accurate and timely data restoration in the event of system outage or natural disaster.

The Challenge

The critical nature of this non-profit's data combined with the hundreds of people requiring access to the data made it necessary to have a dependable backup system to safeguard their livelihood. It was quite obvious that the best backup system would not only backup and restore data; it would ensure the ability to recover from a disaster.

The Solution

With the help of the STORServer Backup Appliance, the non-profit backs up their production servers and 27 other servers in the organization in just 20 minutes a day. When a restore is required, the STORServer Backup Appliance restores all information with the simple click of a mouse, has quick access to data and requires no more digging through countless files.

Since the implementation was completed, the STORServer Appliance has never failed in restoration. Complete confidence has been instilled and any help required in a critical situation will be provided by STORServer instead of multiple vendors, as was the case with the previous system.
