

CASE STUDY › TECHNOLOGY

The Customer

This custom software provider for the insurance industry ensures their livelihood by guarding not only their own seven terabytes of production data, but also their clients'. Reliability is a huge factor in their backup, archive and disaster recovery strategy.

The Challenge

The critical nature of this firm's data required that a complete restore be possible should an entire application become corrupted or a database lost. Dependency on a client's backup was not an option since there was no control over how effective an independent entity's solution was.

A search began for a solution to improve the manageability of backups and to reduce costs as well as be easy to manage and use. It must include sophisticated capabilities to ensure timely and effective data restores.

The Solution

A STORServer Backup Appliance was chosen for its ease of use, automated style of data management and the ability to navigate and retrieve specific data nearly instantaneously. With the help of a STORServer Backup Appliance, disaster recovery was ensured and the firm has reduced the backup window more than 50 percent.
